

I claim:

1. A respiratory appliance for pediatric inhalation induction comprising:

(a) a face mask tube having a wall, a cushion at a lower edge wide end of said wall contiguous to a patient's face, and an opening connecting to a narrow end being able to connect with an anesthesia or a respiratory circuit, and (b) at least one balloon or an inflatable toy, which is played by blowing or breathing, each connecting to one tube which joins to said wall of said mask by means for providing an airway from said mask to said toy; connected to said mask tube with a small tube, said wide end having different sizes to fit pediatric patient's face, said narrow end having an adjustable one way valve, which controls air to flow in and out of said mask, said small tube containing an adjustable one way valve, which controls air flow in and out of said balloon or said inflatable toy; whereby a child can play continually inflate said balloon or said inflatable toy by breathing inside said mask during said inhalation induction.

Claim 2 is canceled

3. A respiratory appliance for pediatric inhalation induction comprising:

an adaptor or a pipe having a upper opening and a lower opening, and at least one balloon or inflatable toy connected to said adaptor with a small tube, containing an one way valve, connecting to said upper opening being able to connect with an anesthesia or a respiratory circuit, and a said lower opening being able to connect with a face mask, connecting to a hollow member which is contiguous to a patient's face by means for breathing, and said adaptor having an adjustable one way valve, which controls air to flow in and out of said mask, said small tube containing an adjustable one way valve, which controls air to flow in and out of said balloon or inflatable toy; (b) at least one toy, which is played by blowing or breathing, each connecting to one tube which contains an one way valve and joins to a wall of said adaptor by means for providing an airway from said adaptor to said toy; whereby a child can play continually inflate said balloon or said inflatable toy by breathing inside said mask during said inhalation induction.

Claim 4 is canceled.
